Professional Summary

Product Engineer with 1.5+ years of startup experience building internal tools, workflow automations, AI-powered applications, and high-performance web experiences. Experienced in translating business problems into software that improves operations, user experience, and business outcomes. Built production systems, internal platforms, and AI products from idea validation through implementation using modern web technologies.

Experience

Product Engineer / Full Stack Developer *Remote*
BetterMind Labs *Sep 2024 – Present*

- Built and maintained the company's primary marketing website, supporting 30–40K monthly organic impressions while improving UX, performance, and SEO.
- Wrote and published 5 SEO-focused blogs per week to support organic growth and content marketing initiatives.
- Built workflow automations that eliminated 5–6 hours of manual work every day for the founder by streamlining operational processes.
- Increased parent consultation attendance from 40% to 90% through automated communication and reminder workflows.
- Designed and developed core CRM pages from scratch with a user-first approach, improving operational workflows for internal teams.
- Reduced CRM network requests from 88 to 12 using API batching and grouped endpoints.
- Reduced initial page payload from 7 MB to 250 KB by decoupling frontend dependencies and optimizing data loading architecture.
- Built an internal AI-powered project recommendation system used by 50–60 students per cohort, transforming educational research into personalized project recommendations.
- Collaborated across engineering, design, and business teams to rapidly prototype and ship customer-facing and internal products.

Projects

Draft – *AI Student Knowledge Vault* *React, FastAPI, SQLite*

- Built an AI-powered knowledge management system that organizes student achievements, documents, and experiences into a searchable personal knowledge base.
- Designed a full-stack architecture using React, FastAPI, SQLite, and Groq LLM APIs to deliver low-latency AI workflows.

Signals – *AI Research-Based Project Generator* *FastAPI, SQLite*

- Built an internal AI recommendation engine that transforms educational research into personalized student project recommendations.
- Integrated external APIs, structured research datasets, and AI models to generate tailored project ideas.
- **Used internally by 50–60 students per cohort** as part of BetterMind Labs' admissions preparation workflow.

Technical Skills

Languages: Python, JavaScript, C++, SQL

Frontend: React, Tailwind CSS, JavaScript

Backend: FastAPI, Django, Node.js, Express.js

Databases: SQLite, PostgreSQL

Developer Tools: Git, REST APIs, Postman, Vercel, Render

Education

Symbiosis Skills and Professional University *Expected Graduation: 2027*
Bachelor of Technology in Computer Science Engineering
CGPA: 8.0/10
